

The Olympic flag

To help you achieve the right proportions and colours in the “olympic_rings” exercise, below is a copy of the official version of the Olympic flag.

Note that in the real flag the rings are interlocked. This would be rather complicated to do accurately using Turtle graphics (although you’re welcome to try!), so we’ll be content with a version in which the rings just overlap without being interlocked, as in the following image produced by our solution.

Of course, the real point of the exercise is to discover how we can write the code to draw just one ring and then reuse it five times.
